IRVINE, Calif., March 3, 2009 — [Pacific Power Source, Inc.](http://www.pacificpower.com), a leading manufacturer of high-performance [AC Power Sources and Power Conversion Equipment](#), has announced the appointment of Francois Epp as its new European Sales and Marketing Manager.

Epp, a French citizen also fluent in German and English, joins Pacific Power after a successful 14-year career with a major European manufacturer and supplier of electrical safety and cable testers. In his most recent position, Epp's responsibilities included management of sales, marketing and distribution channels, development of functional specifications for integrated systems, creation of detailed engineering proposals for specialized customer applications and project coordination.

Epp studied test-and-measurement electronics and physics at the University of Strasbourg. He went on to complete his studies and earn a degree from the Engineering School of Offenburg, Germany, in 1995.

Mitchel Orr, Pacific Power Source's Sales Manager, says: "We are delighted to have Francois on our team, and his appointment underscores our commitment to providing our European customers with the products and solutions that will help them grow their businesses. In conjunction with our factory-owned service facility in the U.K., the focused efforts of Francois Epp in Europe will allow us to provide the level of application support, product training and service that our customers expect from a market leader. Our goal is to provide customers with complete solutions for their various applications, and to be partners in helping them gain efficiency and grow profits."

About Pacific Power Source

Pacific Power Source, Inc., founded in 1973, is a world leader in high-performance AC Power Sources and Power Conversion Equipment. The company designs and manufactures its products at its headquarters and main facility in Irvine, California, and maintains sales and service centers in China (Shanghai), the United Kingdom (Camberley), and France (Strasbourg). In addition, PPS has a worldwide network of sales representatives and distributors.

Pacific Power Source offers standard products that range in power from 500VA to 625kVA and above. Low-power products include line conditioners, frequency converters and programmable AC power sources. High-power systems include power line conditioners, frequency converters, programmable AC power test equipment, and uninterruptible AC power sources.

The company can also design and customize products to meet customers' exact specifications, unlike other suppliers in the industry. Whether the requirement is for an AC Test System, current source or fully-integrated ATE rack, Pacific Power Source has a solution.

Major markets served by Pacific Power Source include Commercial/Industrial and Military, with applications ranging from Research and Development and Manufacturing to Facility Power. Key market segments include Aerospace, Appliances ("Whiteware"), Communications, Computers, Government Laboratories, Lighting, and Test and Measurement Instrumentation. The company's customers include a broad array of domestic, military, and multinational firms with operations throughout the world.
